CSCE4610: Project Grading Sheet  
(Krishna Kavi)

Assumption: Use simulations to evaluate architectural design  
or compare different features using simulations

Student Name: ________________________________

Project Title: ________________________________

1. Problem Difficulty  
   Originality, scope and extent of investigation  
   15%

2. Project Details  
   Completeness  
   Analysis of experimental results  
   Identification of strengths, weaknesses  
   Comparative evaluation  
   Practicality, reasonableness of approach  
   60%

3. Grasp of salient features  
   Report must convince me that you understood the concepts  
   You can do this by using your own examples, describe the concepts  
   in your own words, etc.  
   10%

4. Relate the project to the course  
   Project must be related to the course contents (computer systems architecture)  
   10%

5. What did you gain from the project  
   How did the project complement/supplement class discussion  

6. Annotated references  
   All references must be annotated  
   5%

7. Bonus  
   Depends on the extra credit work  
   Must discuss this before you start on the project

TOTAL /100%
